ADVERTISING INDUSTRY TREND

It was predicted that advertising industry will see a few trends from last year follow through as well as a focus on streamlining operations with agile methodologies and digital tools. A return to brand trust and honoring teams (over individuals) is what marketers and creatives are likely to be attuned to in 2017.

The industry will ramp up its use of digital marketing and advertising tools to streamline marketing workflow

As brands and ad agencies continue to leverage multiple channels to capture new audiences, eliminating tedious administrative tasks is high on the agenda. Some of the digital tools that the industry is moving towards are: marketing approval workflow software, agency approval workflow software, project management software, online proofing tools and resource management software.

There is no "i" in team

While every brand and ad agency needs highly skilled individuals on board, in 2017 it's back to basics with a focus on teams to propel businesses forward. Experts are also warning that departments need to stop working in silos and implement processes and tools that offer greater transparency over the entire business. HEALTH TIPS

Tips for preventing Diabetes

- Lose excess body fat. Being overweight is a big risk factor for diabetes.
- Follow a plant-based, low-calorie diet. Eat a variety of fruits and vegetables. Avoid foods which are rich in trans fats (also called hydrogenated fat), saturated fat, and sugar.
- Drink water. Studies link sugar-sweetened beverages with obesity and diabetes.
- Move your body. Physical inactivity raises the risk of diabetes. Exercise renders cells more sensitive to insulin.
